Meeting Cheat Sheet — Thu Apr 30, 9:30am

Personal — fold into notebook, don't hand out. Assume they haven't read the overview PDF yet. Walk them through the basics out loud before stating the ask.

Why they'd want this — subtext only, **never say out loud**

You're offering value, not asking for a favor. Read this once before walking in, then forget the words and just walk in confident:

- **Mr. Campeau** — concrete operationalization of the honor code; peer-support culture made visible; student-initiative win. Zero faculty workload.
- **Dr. Balossi** — "Sage Hill student built a platform now used by N schools" is an admissions / alumni / fundraising story. Improved AP outcomes at no school cost. Proof Sage's mission shows up in practice, not just on the wall.
- **For both** — revocable in one click. No Sage infrastructure. Faculty admin available. The parent-call scenario is already pre-planned.

Internalize this so you don't sound supplicant. Don't say any of it out loud — saying these reasons reads as managing them, and admins smell that.

Opening (90 seconds, out loud)

Hand them the printed overview PDFs as you sit down — *"I brought a one-pager in case it's useful to follow along or for after."* Then talk them through it without them needing to read it.

> *"Thanks for taking the time. Quick context — Success at HS is a study-notes platform I built independently. The Sage instance is at sage.successaths.com. Students sign in with their @sagehillschool.org email and upload notes, study guides, or practice tests, organized by course and unit.*
>
> *The cheating-prevention story has **three layers**. One: an honor-code checkbox at the moment of upload. Two: every submission is reviewed by an admin before going live — nothing publishes until a human approves it. Three: every approved item has a flag/report button so any student can re-trigger review.*
>
> *What I'm here to ask: permission for a 4-week alpha — 30 to 50 students between AP exams and finals — with a proper rollout in September if it goes well. Built and funded entirely by me. Sage bears no cost or technical responsibility.*
>
> *You don't owe me a yes today. I'm flexible on whatever changes would make you both comfortable. Want me to walk you through the live site?"*

Then **shut up. Let them lead the conversation.**

If they ask "tell me more before the demo" — talking points to cover

Topic	One-liner
Branding	Multi-tenant — Sage is one tenant of several schools using the platform. Not officially endorsed by Sage. Terms and FAQ explicitly say so.

Data	Name, school email, graduating year, uploads. Stored on Vercel + Supabase + Resend, all US providers. Privacy policy is public.
Cost	Free for students. No ads, no premium tier, no data sales. Optional $50/month contest is from my pocket — off by default until the school approves.
Continuity	Documented handoff: when I graduate, faculty sponsor + rising student admin team OR shut Sage's tenant down. School's call. No code lives on Sage infra.
Faculty oversight	Any faculty member you designate gets full admin — same delete-anything controls as me.

Demo (when they ask, ~5 minutes)

1. **Landing page** at `sage.successaths.com` — what students see logged out
2. **Sign in** — restricted to `@sagehillschool.org`
3. **Browse → course → unit → material** — student experience
4. **Submit page** — point at the **honor-code checkbox** explicitly
5. **Switch to admin view → Submissions queue** — click **Approve** on a real-looking pending item
6. **Show the report flag** on an approved material — click it, show the modal

Don't show: contest page, marketing assets, leaderboard (unless asked).

Hard-question quick answers (some overlap with opening — repeat is fine)

If they ask...	Say...
What if students cheat	Three layers (honor code + admin review + flag). I can also remove anything within hours.
What when you graduate	Documented handoff: faculty sponsor + rising student admin team, OR shut Sage's tenant down. School's call. No code on Sage infra.
Who has admin access	Me + students I designate. Happy to give Mr. Campeau, Dr. Balossi, or any faculty full admin — same controls.
Parent calls about something	Same-day takedown. Full data export at no cost. School can revoke entire tenant any time.
Is this an official Sage thing	No. Multi-tenant — Sage is one tenant. Terms + FAQ explicitly say independent, not officially endorsed.
How is it monetized	Free. No ads. No data sales. Contest from my pocket, optional per school, off by default.
What data is stored	Name, school email, graduating year, uploads. Vercel + Supabase + Resend. Deletion within 7 days on request.
Why now / why this timing	AP review + finals is the highest-value moment for shared notes. May = alpha; September = proper launch.

Can faculty add their own materials	Faculty can sign in with their @sagehillschool.org email and upload like any user, OR be granted admin to manage the queue.
Can students post anonymously	No. Every account tied to a verified school email; every submission tied to an account.
What about copyrighted material	Honor-code checkbox covers it; admin review catches what slips through; flag button is the third layer. We've never approved an obvious violation.

When stuck on a hard question

> *"That's a fair concern. Let me think about it — what would a good answer look like to you?"*

Pulls them into co-designing the solution. Way better than a half-baked on-the-spot answer.

DO / DON'T

DO

- Hand the overview PDFs at the start — even if they don't read them now, they have the link list and the policy summary for after
- Take visible notes when they raise concerns (signals seriousness)
- Confirm any verbal yes out loud before leaving — *"To make sure I got it: ..."*
- Ask what they need from you — *"Anything specific you'd like me back with — privacy summary, faculty-admin proposal, parent communication?"*

DON'T

- Lead with the contest/prize. Wait for them to ask.
- Push for an immediate yes
- Get defensive on a hard question (concerns ≠ accusations)
- Over-explain the tech stack — they don't care it's Drizzle on Supabase
- Assume yes is the only outcome
- Read the overview to them — they'll resent it. Talk *around* the doc, let them flip through it themselves if curious.

Possible outcomes (be ready to gracefully accept any)

- ✅ **Approved unconditionally**
- 🔧 **Approved with conditions** — "yes if you make a faculty admin"
- 🧪 **Pilot only** — "seniors only this spring"
- ⏸ **Come back in fall** — they want more time
- ❌ **No yet** — revisit, regroup
- 🔄 **Wants more docs first** — privacy summary, parent communication, faculty announcement

---

Asks (if they say yes)

- Faculty admin contact name
- **Any institutional channel for announcement** — newsletter paragraph, an email from the Dean to seniors/juniors, advisory-period mention, or a faculty member spending 60 seconds in their AP review class

- IT whitelist push for `sage.successaths.com`
- Any required edits to overview / TOS / contest

(There's no town meeting between now and end-of-year, so don't ask for that. Frame the institutional ask as flexible — "whatever feels right to you" — rather than naming a specific channel.)

Bring

- Laptop, charged, signed in as **admin**, `sage.successaths.com` loaded
- Phone (backup demo + mobile experience demo)
- 2 printed copies of `success-at-sage-overview.pdf`
- Notebook + pen
- This sheet, folded inside the notebook

After (within 4 hours of meeting)

Send recap email to Mr. Campeau + Dr. Balossi:

> *Subject: Re: Request for Approval — Success at Sage*
>
> *Thanks again for the time today. To recap what we discussed: – [decision / direction] – [what I'm doing next] – [what you'll get back to me on]*
>
> *[Anything I committed to deliver, with a date.]*
>
> *Let me know if I missed anything.*
>
> *— Jahaan*

You built this thing. You know it. Walk them through it slowly. Listen more than you talk. Let the demo do the heavy lifting.
