Meeting Talk Track — Thu Apr 30, 9:30am

*Linear script for rehearsal. Memorize the **structure** end-to-end so it becomes muscle memory. Memorize the lines marked **VERBATIM** literally. Everything else is a beat to hit, not words to recite.*

Total budget: ~30 min. Opening = 90 sec. Demo = 5 min uninterrupted (8–10 with their questions). Q&A = the rest.

Why they'd want this — subtext only, NEVER say out loud

You're offering value, not asking for a favor. Read this once tonight, then forget the words and walk in confident:

- **Mr. Campeau** — concrete operationalization of the honor code; peer-support culture made visible; student-initiative win. Zero faculty workload.
- **Dr. Balossi** — "Sage Hill student built a platform now used by N schools" is an admissions / alumni / fundraising story. Improved AP outcomes at no school cost. Proof Sage's mission shows up in practice, not just on the wall.
- **For both** — revocable in one click. No Sage infrastructure. Faculty admin available. The parent-call scenario is already pre-planned.

Internalize this so you don't sound supplicant. Never say any of it out loud — saying these reasons reads as managing them, and admins smell that.

SECTION 1 — Opening (90 seconds) · VERBATIM

Sit down. Set laptop on the table, lid still closed. Take out the printed PDFs.

> *"Thanks for taking the time."*

Hand each of them a printed overview PDF.

> *"I brought a one-pager — it might be useful to follow along, or for after."*

Brief beat.

> *"Quick context — Success at HS is a study-notes platform I built independently. The Sage instance is at sage.successaths.com. Students sign in with their* `@sagehillschool.org` *email and upload notes, study guides, or practice tests, organized by course and unit."*

Pause. Let it land.

> *"On academic integrity, there are three layers."*
>
> *"**One** — an honor-code checkbox at the moment of upload. Students confirm the material is their own work, or publicly shareable, before they can submit anything."*
>
> *"**Two** — every submission goes through an admin review queue. Nothing is visible to other students until a human admin has approved it."*
>
> *"**Three** — every approved item has a flag/report button, so any student can re-trigger review if something slips through."*

Pause again. This is the key moment.

> *"What I'm here to ask for today is permission for a four-week alpha — maybe 30 to 50 students between AP exams and finals — with the goal of a proper rollout in September if it goes well. Built and funded entirely by me. Sage bears no cost or technical responsibility."*

Genuine pause. Don't fill the silence.

> *"You don't owe me a yes today, and I'm flexible on whatever changes would make you both comfortable. Want me to walk you through the live site?"*

STOP TALKING. Wait for their response.

They will either say "go ahead" / "yes show us" or ask a question first. Both are fine. Answer any question they ask, then come back here when they're ready for the demo.

SECTION 2 — Demo transition (15 sec)

When they say to proceed, open the laptop and turn it toward them.

> *"Okay, I'll keep this brief — about five minutes — and we can go deeper anywhere you want."*

SECTION 3 — Demo (5 minutes, six steps)

The script below is what to say at each step. The exact words don't matter — hit the talking point and move on. If they interrupt, stop and answer; come back after.

Step 1 — Landing page (45 sec)

Show `sage.successaths.com` *(already loaded, signed out).*

Talking point: what a student sees logged out, plus the multi-tenant context.

> *"This is what a student sees if they hit the site without an account. It's Sage-specific — every school we add gets its own version with their name. The platform itself is multi-tenant; Sage is one of the schools using it."*

Beat. Don't click yet — let them register the page.

> *"Let me sign in as a student."*

Step 2 — Sign in (30 sec)

Click Sign In. Use the pre-loaded admin account.

Talking point: restricted to verified school emails.

> *"Sign-up and sign-in are restricted to* `@sagehillschool.org` *addresses. Anyone outside the domain bounces back. Everyone is identified."*

Sign in. Land on dashboard.

Step 3 — Browse → course → unit → material (75 sec)

Talking point: the student experience, organized by course and unit.

> *"This is the dashboard — courses on the student's schedule. Or they can browse the full catalog..."*

Click Browse.

> *"...every department, every course Sage offers."*

Click into a course (e.g. AP Calculus BC).

> *"Each course has units."*

Click into a unit that has materials.

> *"Each unit has approved materials. Notes, PDFs, photo scans auto-converted to PDF, external links. Every one of these went through admin review."*

Click open a material.

Step 4 — Submit page · THIS IS THE KEY STEP (60 sec)

Navigate to `/submit`.

Talking point: the honor-code checkbox is the first integrity layer. Make sure they see it.

> *"Now let's see what a student does to upload."*

Briefly show: pick course, pick unit, title, file picker.

> *"Pick a course, a unit, give it a title, drop the file."*

Point physically at the honor-code checkbox.

> *"And here — this is the first integrity layer. Required. Students can't submit without confirming the material is their own work or publicly shareable. Real tests, answer keys, copyrighted material — they're explicitly on the off-limits list."*

Brief pause. Make sure they LOOKED at it.

> *"Once they submit, it's invisible to other students until I approve it."*

Step 5 — Admin queue → approve (75 sec)

Navigate to `/admin/submissions`.

Talking point: every submission gets human review.

> *"Which is where I come in. This is the admin moderation queue."*

Show the list of pending items.

> *"Every pending submission lands here. I can preview it, approve it, reject it with a note that goes back to the student, or edit it before approving."*

Click Preview on a realistic pending item.

> *"I see exactly what the student would see after approval, plus their identity. If it looks legitimate, I approve and it goes live. If it doesn't, I reject with a reason and they can revise."*

Approve it (or not — your choice).

Step 6 — Report / flag (45 sec)

Navigate back to a unit page with approved materials.

Talking point: the third moderation layer.

> *"Third layer. Every approved material has this flag icon."*

Hover or click the flag.

> *"Any student can click it and report something — say it's a real test, or copyrighted, or anything. That triggers a re-review."*

Show the modal that opens.

> *"I see the flag immediately, can pull the material down with one click, and notify whoever's relevant on the school side."*

Close the modal.

SECTION 4 — Demo close (30 seconds) · VERBATIM

Look up from the laptop. Eye contact with both of them. Slight pause.

> *"That's the platform. I won't show you the contest leaderboard or the marketing assets unless you want to dig into those — those are optional and off by default until the school approves anything."*

Beat. Open posture.

> *"What questions do you have?"*

STOP TALKING. Genuinely open question. Wait. Do not fill the silence.

SECTION 5 — Q&A (rest of the meeting)

Their territory now. When stuck:

> *"That's a fair concern. Let me think about it — what would a good answer look like to you?"*

SECTION 6 — Wrap (last 3–5 min) · key phrases VERBATIM

When the conversation winds down, take control of the close.

Confirm the direction explicitly:

> *"To make sure I got the right summary — [paraphrase what they said]. Does that sound right?"*

Ask what they need from you:

> *"Is there anything specific you'd like me to come back with — a written privacy summary, a list of student admins, a faculty-sponsor proposal, anything for parent communication?"*

If they said yes (with or without conditions), confirm the asks:

> *"Three quick things on my end: a faculty admin contact name, whether there's any institutional channel you're comfortable announcing on — a newsletter mention, an email to seniors, whatever feels right — and an IT helpdesk push for* `sage.successaths.com`*."*

(The town meeting between now and end-of-year already passed, so don't ask for one. Keep the institutional ask flexible — newsletter / Dean's email / advisory-period mention — and let them pick the channel.)

Close:

> *"Thank you — I'll send a recap email this afternoon."*

RECOVERY LINES (in case you blank)

If you forget what comes next mid-meeting, any of these buy you a graceful pause:

> *"Let me make sure I'm being clear about that…"*
>
> *"One second — let me find the right way to say this."*
>
> *"That's a fair concern. Let me think about it — what would a good answer look like to you?"*
>
> *"Can I take a note on that and come back to you tomorrow with a real answer?"*

REHEARSAL NOTES (do this tonight)

1. Read the "Why they'd want this" section once. Internalize the posture, then forget the words.
2. Read the **VERBATIM** sections (Opening + Demo close + Wrap) out loud, twice. Don't try to memorize the rest.
3. Walk through the demo on your laptop **once with the script open**, then **once without**.
4. Time yourself. The full opening + demo from "Thanks for taking the time" through "What questions do you have?" should land between **6:30 and 7:30 minutes** without interruptions. If you're hitting 9+, you're talking too much; cut.
5. Stop rehearsing by 10pm. Sleep is more useful than the 30th run-through.

The demo is the proof. The opening is the framing. Everything else is conversation. Walk in confident; let them set the pace.
